Iraq Body Count is an ongoing human security project which maintains and updates the world's largest public [database](#) of violent civilian deaths during and since the 2003 invasion. The count encompasses non-combatants killed by military or paramilitary action and the breakdown in civil security following

the invasion. Data is drawn from cross-checked media reports, hospital, morgue, NGO and official figures to produce a credible record of known deaths and incidents. (more in [About IBC](#))
